

Sreekanth V

Data Analyst

Profile

A highly analytical and detail-oriented individual with a strong background in data analysis, statistics, and programming. Proven ability to use Python, Excel, Power BI, and SQL to extract, process and analyse complex data sets. Seeking a challenging role as a data analyst where I can apply my skills to uncover insights and drive business decisions.

Experience

Project-1

Data Analysis and Visualization for Brazilian E-commerce Business:

- As a team, we have challenge to address the limited understanding of online sales trends.
- Conducted extensive data exploration using SQL and Power BI and created interactive dashboards to effectively communicate insights to decision-makers.
- Analysed the Brazilian E-commerce dataset to gain valuable insights into customer behaviour and preferences and developed visually appealing dashboards to effectively communicate insights to decision-makers.
- Turned data into actionable insights, enabling the business to make informed decisions and improve performance, delivering data-driven solutions that addressed the challenge of limited understanding of online sales trends.

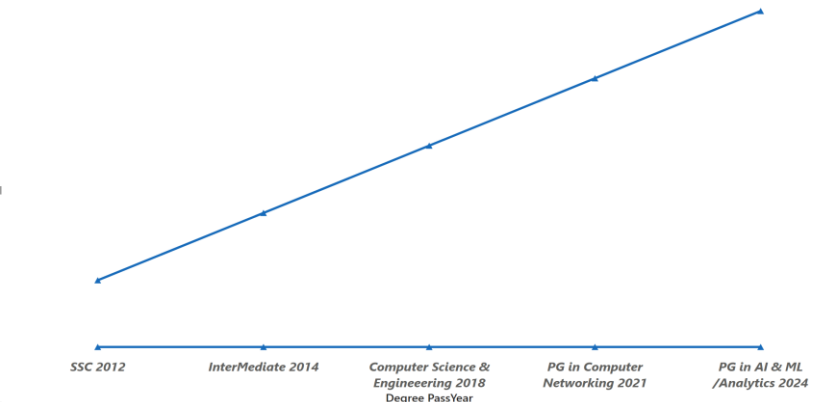

Project-2

Product Sales Analysis Using SQL:

- We have challenge to address the product performance for the Bike stores based on sales.
- Assisted a bike store in understanding product performance and making informed decisions about product offerings.
- Conducted extensive data analysis using SQL to identify product sales trends and understand customer behaviour and preferences.
- Delivered actionable insights to decision-makers that enabled them to make data-driven decisions about product offerings.
- Solved the challenge of limited understanding of product performance by using SQL to gain insights and drive improvements in product sales and overall performance.
